```
Recursion:
   When a function calls itself then that function is known as recursive function and that concept is known as recursion
In [2]:
   1: Linear recursion
   2:binary recursion
   15
   memory in os
   heap--objects are stored
   stack-- function calling and variables
   data members/instructions
In [ ]:
   Iteration vs Recursion
   1: Recursion is stored in stack memory thatswhy its is slower than iteration methods.
   2: Recursion takes more time and memory
   #factorial of a number using recursion:
   def recur_factorial(num):
     if num==1 or num==0:
      return 1
     else:
      return num*recur_factorial(num-1)
   num=int(input())
   print(recur_factorial(num))
   3000
In [2]:
   #factorial of a number using iteration
   def iter_factorial(num):
     fact=1
     for i in range(1, num+1):
      fact=fact*i
     return fact
   num=int(input())
   print(iter_factorial(num))
   5000

   Libraries of Python:
   1- Works on Matrices rows and coloumns : Numpy
   2: Works on scientific computation : scipy
   3: works on csv files , data handling , data manipulation : Pandas
   4: For implementing user interface : tkinter
   5: For web scrapping - beautiful soap , requests
   6: For creating Machine Learning apps : Streamlit
   7: For dynamic websites : Django , tornado
   8: for making game : Pygame
   9: for static websites : flask
In [ ]:
   for any software developmeent:
```

1: Front-End part --> HTML ,CSS , JS TKINTER

2: Encapsulation --- Wrappng of variables and methods 3: Polymorphism --- poly : many morphisms:forms

Python: Core and Advanced

Why we use oops concepts in our projects:
1: Inheritance --- reusability

4: Abstraction -- data hiding

2: backend part --> php , Nodejs , Python , Java , VisualBasics , SQL , No sql Mongodb
